

# Become a Better Shooter With Laser Ammo!

By Jace Walters (15)  
@JaceWaltersRecreation

I have been using Laser Ammo training aids for about a year now and I love it! There are so many ways to practice with it and you can set it up in a variety of combinations on the control panels. With the Laser Ammo IMTT-S training aid, you can setup the targets in a: move and shoot scenario, plate rack, double tap, or shoot don't shoot target. There are also different size targets you can put on the controller bases, as well as different targets such as circle targets and silhouette targets. You can use those different size targets to simulate targets at different distances within a small room. This system works good for me to train for outdoor GSSF matches where you shoot plate racks, paper, and steel targets. It also helps me be able to acquire my first target faster and with more consistency, which then helps me lower my shooting time.

With the LaserPET II Electronic Target System I can practice my accuracy and speed on a single target, you can also change the size of the target to really test your accuracy. I also use the LaserPET to practice for

indoor GLOCK matches since you have a set amount of time to shoot your shots, and I can set a timer and a shot count to replicate that so that I maximize the time allotted.

As far as the training pistols go, they offer many different styles. So, you have a good chance to train with your same firearm in your home using no ammo on your own smokeless range. Their laser training guns use green gas to simulate a shot being fired, the slide cycles which causes the trigger to reset so you can train in a true semi-automatic manner. You also have the option to choose between a red laser or an invisible (IR) laser. There is also another option where you do not have to purchase the laser training gun, instead you can get the SureStrike cartridge that will turn your own firearm into a laser training gun.

The Laser Ammo Smokeless Range is their top-of-the-line training aid, this system projects simulated life like interactive scenarios for you to engage with. It will work with their training pistols and SureStrike cartridge, so no need to buy anything

new. All you need is a computer, projector and a wall or screen to project on and you are ready to train as if you are really there. You can switch between shooting drills like Tracking Drills, Speed Drills, Match Drills, Dueling Trees, Trap and more with the click of a mouse. And more than one person can use this system at the same time, so you can compete against someone else and really push yourself and have fun too.

Using these different Laser Ammo training aids has really helped me become a better shooter since I can work on many different things in the comfort of my home. My parents also really like it so they don't always have to drive me out to a firearms range so I can practice, and it also saves them a lot of money on ammo. The Laser Ammo training aid can help you improve your shooting just like it has helped me.

*Editor's Note: We have been using Laser Ammo systems for the past seven years with great success. It is one of the best systems for teaching and training, from junior-to-adult, and beginner to expert.*
